Preface

In our country, usage of computers has already established its importance in almost every, however big or small spheres of our lives. Computers have entered into our shops, small and big business houses, offices – Government and private, institutions and organizations and so on and on, the list is not small. Computers have entered into even the study rooms of our kids taking their way via schools, and other small and big computer training institutes. Involvement with computers is increasing by the day in our country. With intense efforts of large number of government and private sector institutions, computer literacy is getting momentum in leaps and bounds. Some senior intellectuals and persons in position are making sincere efforts in the direction of spreading computer literacy in our country.

As we all know that evolution and development of computer science occurred in Europe and America. Eventually most of the literature on computer science is published in western countries. Texts written by foreign authors are not easily grasped and understood by a large section of students in our country. Besides computer science comprises of several terms and words whose literal meaning in common use is entirely different from what these are meant in the study of computer sciences. Keeping in view such things, complicated terms have been clarified in this book in easy-to-understand language.

Latest and modern terminology of Multimedia, Internet and typical software terms have been incorporated in this latest volume.

It is sincerely hoped that users will benefit a great deal from this book.

-Vishnu Priya Singh
