

Preface to NSQF Compliant Revised Edition

Mechanic Diesel under the Craftsmen Training Scheme is one of the popular trades for which training is imparted through a vast network of Industrial Training Institutes. The competency – based curriculum prescribed by the Directorate General of Training (DGT) comprises basically of domain area and core area. Within the domain area, trade theory forms an important part. While trade practical takes major part of training time, trade theory tops the list among all other subjects in terms of training time allocated. Undoubtedly proper understanding of theoretical aspects of the trade helps build a strong base to meet the challenges a craftsman has to face when later settled on the job.

As per the current trend, trade theory related knowledge and understanding is tested through a series of objective type test items, wherein a candidate is required to choose the correct option within those given (usually four) for each question. A candidate can successfully face this type of test only if he can well understand the question and differentiate between the one right option and the other wrong options.

This Q – Bank relating to the Mechanic Diesel Trade has been prepared keeping this basic issue in mind. There are nearly 1000 multiple choice questions, grouped into appropriate modules and in a pattern similar to the one the candidates are required to face in the All India Trade Test. To further enhance its utility and to help trainees to learn through proper understanding, explanatory notes are given to several questions supplemented by quality figures, definitions, data etc. which should prove highly beneficial to the trainees to prepare for the trade test with confidence. Furthermore, latest A.I.T.T. question papers with key have been included.

Besides the ITI trainees in Mechanic Diesel trade, candidates appearing for various competitive examinations / interviews for jobs in many public, private, state and central government enterprises should find this book of great help. Several enterprises prescribe ITI level as necessary qualification for recruitment. Railway Recruitment Board (RRB), enterprises engaged in manufacture, sale and service of automobiles, are among a few such examples.

Wishing our trainee readers a grand success in A.I.T.T. and job seekers decent post-training placement we remain committed to continuous improvement and would welcome suggestions for further improvement of this book.

Contents

Module	Pages
1. Workshop Safety Practice	1–5
2. Measuring and Marking Practice	6–22
3. Fastening and Fitting	23–34
4. Electrical and Electronics.....	35–39
5. Arc and Gas Welding.....	40–47
6. Hydraulics and Pneumatics	48–55
7. Specification and Service Equipments	56–60
8. Diesel Engine Overview.....	61–67
9. Diesel Engine Components	68–76
10. Cooling and Lubrication System.....	77–84
11. Intake and Exhaust System.....	85–89
12. Fuel System.....	90–100
13. Marine and Stationary Engine	101–104
14. Emission Control System.....	105–108
15. Charging and Starting System.....	109–116
16. Trouble Shooting	117–120
